FOR IMMEDIATE RELEASE

TapRoot Systems, Inc. Announces LinuxTel™ Support for Trolltech's® Greensuite Initiative

RESEARCH TRIANGLE PARK, NC -- February 6th, 2007 – TapRoot Systems Inc., a leading provider of embedded software solutions and reference platforms for smartphones, today announced that LinuxTel™, the company's carrier grade telephony solution will support Trolltech's recently announced Greensuite Initiative.

The Qtopia Greensuite initiative actively addresses reducing a manufacturer's time to market and the technology fragmentation issues of today's Linux mobile phone market, pre-integrating best of breed software solutions in a one-stop-shop for mobile phone development. The first software suite announced from the Initiative is Qtopia Greensuite #1, created specifically for high-end smart phone development. TapRoot's LinuxTel telephony software is a critical piece of the offering for mobile phone development. Unlike other common mobile phone operating systems, embedded Linux does not provide a hardware abstraction layer for communications with the wireless network out of the box. LinuxTel provides this important bridge between the underlying hardware and the applications layer. This is accomplished by having access to a comprehensive set of APIs for communication with 2.5G and 3G networks.

"Working together, TapRoot Systems and Trolltech, are able to provide pre-integrated technology components for Linux devices that have the best interest of the customer at mind" said Blane Rockafellow, TapRoot Founder and EVP Business Development. "With our experience and expertise in this space we are able to streamline some of the fragmentation issues of today's mobile Linux market."

LinuxTel also provides support to allow multiple applications concurrent access to network resources. With LinuxTel running inside a phone, users can make a phone call at the same time as running data applications such as web browser or sending an SMS message. This product ready solution from TapRoot can offer substantial savings in time to market for new phone designs on a variety of the latest chipset platforms.

"As they are one of our strategic partners, we are very pleased to be working with a company that has consistently delivered carrier grade products in the Linux marketplace" said Margaret McLeod, Trolltech VP of Marketing. "TapRoot continues to help move us closer to accomplishing our goal of driving Linux further in the market place and enabling the development of feature-rich, high quality products in a short time."

About Taproot Systems Inc.

TapRoot Systems, Inc. provides embedded software products and system integration services for the global mobile phone marketplace. The company specializes in dual-mode (telephony and WLAN) solutions for the industry's major mobile operation systems. Microsoft® Windows Mobile®, Linux™ Mobile, and Symbian®. TapRoot Systems Inc. is a Microsoft® Development Partner, a MontaVista™ Mobilinux™ Partner, a Symbian Platinum Partner, a S60 Contractor and a S60 Wireless Technology Provider. TapRoot Systems is a privately held, venture-funded corporation headquartered in Research Triangle Park, NC, USA with development facilities in London, UK and Vancouver, British Columbia. TapRoot sales offices are located in the United States, London, Taipei, Beijing, Seoul and Tokyo.

About Trolltech

Trolltech® is the company that makes software faster to build and easier to use. Trolltech's magic inspires software innovation and drives improved usability. The magic is the combination of efficient software development with an innovative, high-quality user experience. Trolltech's software increases the appeal of our customer's desktop applications and devices while reducing their risks and software development costs. Trolltech's technologies accelerate the evolution of software by unleashing the creative power of the developer. The company's family of products includes Qt®, which sets the standard for high-performance, cross-platform software development; and Qtopia®, the unrivaled application platform for the efficient creation of Linux devices.

Trolltech software is the foundation for thousands of leading products worldwide, many from Global 2000 companies. Trolltech is a second-generation open source company, with a dual licensing business model that supports open source values and methodology in a profitable, sustainable business. The company is listed on the Oslo Stock Exchange under the ticker symbol TROLL. For more information about Trolltech, please visit <http://www.trolltech.com>.
