FOR IMMEDIATE RELEASE

**TAPROOT SYSTEMS DELIVERS 802.11 (WLAN) SOLUTIONS FOR OEMs and ODMs
LAUNCHING MICROSOFT® WINDOWS MOBILE 6 ENABLED HANDSETS**

RESEARCH TRIANGLE PARK, NC -- February 14th, 2007 – TapRoot Systems Inc., a leading provider of embedded software solutions and reference platforms for smartphones, today announced the release of its embedded WLAN software components that make it easy for OEM's and ODM's to take advantage of advanced Microsoft® Windows Mobile 6 features while meeting carrier system requirements. These software components support several new features required on the next generation of dual-mode smartphones that will be certified and launched on wireless carrier networks.

TapRoot Systems has developed the necessary security and roaming components OEM's and ODM's need to support and manage the discovery, authentication and encryption for WLAN networks on a Microsoft® Windows Mobile handset. Integration-ready components and services include WLAN Security Supplicants, Mobility Management (supporting IMS and UMA methods), Power Management and device drivers.

TapRoot's Security Supplicant for Microsoft® Windows Mobile 6 supports a wide variety of carrier security methods including those required for WPA/WPA2 personal and enterprise certification. The Mobility Management and Power Management solutions allow OEM's and ODM's to bring the power of Microsoft® Windows Mobile together with carrier specific requirements to deliver an optimal user experience for accessing next generation voice, video, and data services on the leading chipsets.

“TapRoot's embedded WLAN software solutions for Microsoft® Windows Mobile 6 handsets enable the leading handset OEMs and ODMs to meet the most advanced carrier requirements on the leading silicon platforms,” said Justin Helmig, Director of Product Management at TapRoot Systems. “We continue to deliver innovative solutions for dual mode handsets powered by Microsoft® Windows Mobile 6.”
